This volume presents a collection of articles centring on the language of the Mishnah and the Talmud — the most important Jewish texts (after the Bible), which were compiled in Palestine and Babylonia in the later centuries of Late Antiquity. Despite the fact that Rabbinic Hebrew has been the subject of growing academic interest across the past century, very little scholarship has been written on it in English.

Studies in Rabbinic Hebrew addresses this lacuna, with eight lucid but technically rigorous articles written in English by a range of experienced scholars, focusing on various aspects of Rabbinic Hebrew: its phonology, morphology, syntax, pragmatics and lexicon. This volume is essential reading for students and scholars of Rabbinic studies alike, and appears in a new series, Studies in Semitic Languages and Cultures, in collaboration with the Faculty of Asian and Middle Eastern Studies at the University of Cambridge.

As with all Open Book publications, this entire book is available to read for free on the publisher's website. Printed and digital editions, together with supplementary digital material, can also be found here: www.openbookpublishers.com

2. THE VOCALISATION OF
MS CAMBRIDGE OF THE MISHNAH

AN ENCOUNTER BETWEEN TRADITIONS

Yehudit Henshke

MS Cambridge Add.470 is one of three excellent manuscripts of all six orders of the Mishnah that transmit the western tradition of the Palestinian branch of the Mishnah. Two features distinguish MS Cambridge Add.470 from its fellow manuscripts of the Mishnah, MSS Kaufmann and Parma A: dating and provenance. According to the watermarks in MS Cambridge its writing dates to the mid-fifteenth century, whereas the other two date to circa the early second millennium, the eleventh–twelfth centuries.

As to provenance, MSS Kaufmann and Parma A originated in Italy, whereas MS Cambridge is a Byzantine manuscript, as evidenced by its codicological and palaeographical features. Whereas Mishnaic Hebrew traditions in Italy are reflected in many sources — manuscripts, incunabula, maḥzorim, among others — and have merited substantial research, the Byzantine tradition, in contrast, suffers from sparsity of sources and research. The study of Byzantine Jewry remained frozen for years until the turn of the twenty-first century, which saw the publication of texts from the Genizah by Nicolas de Lange and seminal studies by Israel Ta-Shma. Although the precise nature of this community’s tradition has yet to made clear, its ties to Eretz-Israel and its unique facets are beginning to emerge.

7 Nicholas De Lange, Greek Jewish Texts from the Cairo Genizah (Texts and Studies in Ancient Judaism, vol. 51; Tübingen: Mohr Siebeck, 1996); Israel Ta-Shma, Studies in Medieval Rabbinic Literature, vol. 3: Italy and Byzantium (in Hebrew; Jerusalem: Bialik Institute, 2005).
8 For selected studies that have appeared in recent years, see James K. Aitken, and James Carleton Paget (eds.), The Jewish-Greek Tradition in Antiquity and the Byzantine Empire (Cambridge: Cambridge University
a Byzantine manuscript, the study of MS Cambridge has much to contribute to our knowledge of the mishnaic tradition in Byzantium.9

A significant distinguishing characteristic of MS Cambridge relates to vocalisation, which is the focus of this article. Whereas MSS Kaufmann and Parma A are entirely or largely vocalised, MS Cambridge is for the most part unvocalised.

Nonetheless, the scribe-vocaliser of MS Cambridge has sporadically inserted partial vocalisation.10 My use of the term ‘scribe-vocaliser’ here is deliberate: the manner of vocalisation, the ink, and its colour all attest that the text was penned and vocalised by the same person.11 Most of the more than two hundred vocalised words in this manuscript were documented by William Henry Lowe, the editor of the version of the text known as *The Mishnah of the Palestinian Talmud* (Cambridge, 1883); others, however, escaped his notice or were misunderstood.

---

11 See ibid., p. 2, n. 8.
This raises the question of what led the scribe-vocaliser to vocalise these words in particular. In general, we can say that the vocalisations found in MS Cambridge serve to underscore or elucidate a textual variant or particular reading from this fifteenth-century Byzantine vocaliser’s tradition, similar to the partial vocalisation found in manuscripts of other rabbinic texts, such as MS Erfurt of the Tosefta.\footnote{Mordechay Mishor, “On the Vocalization of MS Erfurt of the Tosefta” (in Hebrew), \textit{Leshonenu} 64 (2002), pp. 364–392, at p. 233.} The sporadic vocalisations in MS Cambridge mirror a process whereby the vocaliser considered the different reading traditions of the Mishnah with which he was familiar, and decided either in favour of his own tradition or one that seemed worthy or correct. Thus, not only were specific, accurate, and unique reading traditions of the Mishnah preserved in fifteenth-century Byzantium, but it appears that its scribe-vocalisers were also familiar with alternative readings.

These partial vocalisations reveal both the uniqueness and the trustworthiness of the Byzantine tradition reflected in MS Cambridge. On the one hand, this tradition shares some of the features of the punctilious Italian tradition; on the other hand, as shown below, in some instances the Byzantine tradition also preserves earlier, more precise features than those found in the Italian tradition.

Nonetheless, MS Cambridge also indirectly reflects late-fifteenth-century traditions. The vocalisations attest to the vocaliser’s familiarity with these traditions, which were not necessarily of the highest accuracy. The purpose of his partial vocalisation of words was to highlight his ancient Palestinian tradition; in effect, through these partial vocalisations and superior textual traditions he preserved an early Byzantine tradition with parallels in MSS Kaufmann and Parma A, which predate Cambridge by several centuries.
The partial vocalisations in MS Cambridge belong to a variety of spheres: textual variants \((nusaḥ)\), phonology, morphology, and orthography. A particularly intriguing category is that of foreign words (mainly Greek). Select examples from the various categories are discussed in the body of the article. Some of these examples represent readings found only in MS Cambridge; others reflect knowledge of, or a shared tradition with, other manuscripts of the Mishnah.

**NUSAḤ: TEXTUAL VARIANTS**

As noted, the presence of a vocalised word in a largely unvocalised text cannot be dismissed as a slip of the pen, but rather reflects particular interest on the vocaliser’s part. Although unique textual variants are by no means rare in MS Cambridge, they are not systematically vocalised there. Evidently, the vocaliser generally thought one vocalised example per variant in the manuscript sufficient. It is the conjunction of a variant with additional factors that might interfere with the transmission of his tradition, which impelled the scribe-vocaliser to vocalise a word. The use of vocalisation confirms the vocaliser’s familiarity with other reading traditions of the Mishnah that differ from the one he wished to transmit. Thus, vocalisation of the word can function to support a disputed reading.

An especially striking example comes from *Erubin* 3.9, where MS Cambridge attests a unique variant not found in other manuscripts. Furthermore, this reading could be understood as a graphic mistake, namely dittography:
R. Dosa ben Harkinas says, He who stands before the Ark on the Festival Day of the New Year says, May the Eternal Our God strengthen us on this first day of the [new] month whether it be today or tomorrow.

Against these two words in MS Cambridge, we find one word in other manuscripts, as follows: in MS Kaufmann\textsuperscript{14} we find חודש, in MS Parma A\textsuperscript{15} חודש, and in MS Paris\textsuperscript{16} חודש.

The additional word חודש is not found in the other manuscripts of the Mishnah, although it is found in Genizah fragments, as Goldberg notes.\textsuperscript{17} Note that the orthography of MS Cambridge is usually defective. Thus, the word חודש is almost always spelled defectively there,\textsuperscript{18} and the unknown phrase composed of two identical words (חודש חודש) would certainly lend itself to correction or erasure. As a means of stressing the correctness of his version, the scribe vocalised both words to indicate that this is not mistaken dittography.

\textsuperscript{13} \textit{Erubin} 3.9. The Hebrew text of the Mishnah quoted here and below is according to MS Cambridge; the English translation follows, with some minor corrections, the translation of Philip Blackman, \textit{Mishnayoth: Pointed Hebrew Text, English Translation, Introductions} (2nd ed.; New York: Judaica Press, 1963–1964).

\textsuperscript{14} Budapest, MS Kaufmann A 50 (= Kaufmann).

\textsuperscript{15} Parma, Biblioteca Palatina, MS Parma 3173 (de Rossi 138) (= Parma A).

\textsuperscript{16} Paris, Bibliothèque nationale de France, MS 328–329 (= Paris).

\textsuperscript{18} On the defective spelling in this manuscript, see Henshke, “Orthography”.
2. The Vocalisation of MS Cambridge of the Mishnah

Phonology

A noteworthy sphere in which we find the vocaliser of MS Cambridge operating is that of Mishnaic Hebrew phonology. Several examples follow:

לעזר

Berakhoth 1.5 states: "אמר רבי לעזר בן עזריה הרי אני כבן שבעים שנה לא זכיתי". R. Eleazar ben Azariah said, I am like a man of seventy, yet I was unable to understand the reason why the departure from Egypt should be related at night’ (variants: Kaufmann: אלהэр; Parma A: אלעזר; Paris: אלעזר).

The orthography of the names לעזר — ליעזר has been treated at length in studies of Mishnaic Hebrew.19 Focused mainly on the omission of the initial alef and its implications for the provenance and dating of the texts, less attention has been paid to the influence of the silent alef on the realisation of the names and the status of the ayin.

Did the name לעזר retain its biblical form לעזר lʿazar even without the alef, or did additional changes take place when the alef was dropped, perhaps due to the weakness of the guttural ayin that followed it?

Two types of sources assist in clarifying how this abbreviated name was realised: transcriptions, on the one hand, and vocalisation traditions, on the other. The transcriptions into Greek in the Gospels and other literary sources attest to a pronunciation close to the biblical one, e.g., Ἐλαζάρον, Ἐλεαζάρον, λεαζάρος,\(^\text{20}\) and to a new realisation, Λάζαρον, as the name of contemporary individuals.\(^\text{21}\) On the other hand, the vocalisation traditions reflected in the various manuscripts of the Mishnah evidence only a pronunciation close to the biblical one: לְעָזָר.\(^\text{22}\)

The vocalisation לְעָזָר found in MS Cambridge, with a vowel under the first consonant, is supported by some of the transcriptions, but diverges from the general picture derived from manuscripts of the Mishnah. Although this might suggest that this vocalisation reflects the late Byzantine tradition of the scribe-vocaliser, this is not the case. Direct evidence for this vocalisation comes from a Genizah fragment of the Mishnah (T-S E1.57),\(^\text{23}\) and a twelfth-century Oriental manuscript of tractates Aboth and Zebahim.\(^\text{24}\) Indirect

\(^{22}\) In MS Kaufmann it is vocalised רֵעֶל. Its vocaliser adds segol before the shortened form of the name; see Eduard Y. Kutscher, Hebrew and Aramaic Studies (Jerusalem: Magnes Press, 1977), p. 11. The vocaliser of Parma B, on the other hand, does not vocalise the alef (Bar-Asher, Studies in Mishnaic Hebrew, vol. 1, p. 148). This is also true of short names in the Babylonian tradition; see Israel Yeivin, The Hebrew Language Tradition as Reflected in the Babylonian Vocalization (in Hebrew; Jerusalem: Academy of the Hebrew Language, 1985), p. 1079.

\(^{23}\) Birnbaum, Mishna in the Cairo Geniza, p. 299.

support for vocalisation of the \textit{lamed} comes from the spelling \textit{לזר} without the \textit{ayin}.\textsuperscript{25}

Thus, on the margins of the literary transmission that remained close to the biblical realisation there were also vernacular pronunciations that attest to metathesis. Perhaps the movement of the vowel to the consonant \textit{lamed} was supported by the weak \textit{ayin},\textsuperscript{26} or even echoes its silencing, and what we have here is the realisation \textit{lazar}, to which the vocaliser wished to direct attention.

The Mishnah in \textit{Kelim} 17.12 states: \textit{ויש שאמרו מדיה גסה מלא תריווד רקב כמלוא תריווד גדול שלרופים}. \textit{And there were cases where \textbf{[the Sages]} directed \textbf{[the use of]} a large measure, \textbf{[as, for example]} a spoonful of the mould from a corpse, equivalent to the large spoon of physicians’} (variants: Kaufmann: \textit{של보고ים}; Parma A: \textit{של보고ים}; Parma B:\textit{של보고ים}; Paris: \textit{של보고ים}).

The word \textit{שלרופים} is interesting both for its orthography and its vocalisation. Apart from several cases of combined words, throughout MS Cambridge the particle \textit{של} is written separately from the following noun. Thus, for example: \textit{שלסלתים} (\textit{Kelim} 15.4),

\textsuperscript{26} See Henshke, “Gutturals”, pp. 185–187.

\textsuperscript{27} Parma, Biblioteca Palatina, de Rossi 497 (=Parma B).
i.e. Hebrew/Aramaic words and phrases: שלפירות (Kelim 11.5), שלמים (Shekalim 6.3, Yoma 2.5, Sukkah 2.5, 4.9, Baba Bathra 4.6, Middoth 2.6); ה. Our current example, שלרופיים. The preservation of proximity in these instances is the result of a unique spelling that prevented subsequent separation.

Clearly, the preservation of של juxtaposed to רופיים, for which I have found no parallels, is not a corruption, but rather a form preserved because of its unusual spelling. The vocalisation of the entire word also witnesses the scribe-vocaliser’s desire to indicate that this form is neither a mistake nor a corruption.

This word displays another unique feature, which is the alef > yod shift. Much has been written on this exchange. However, in his comprehensive treatment Breuer has shown that a distinction must be made between yod > alef and alef > yod shifts and that the alef > yod shift is the result not of a phonological process, but of a morphological exchange. He demonstrates that in MH the alef > yod exchange is not free, but takes place in the III-alef pattern, which became identical with the III-yod pattern.

This explanation, however, does not fit רופיים, the word under discussion here, because the expected result of such

28 The spelling with samekh hid the של from the separators.
29 The plene spelling apparently kept the של from being separated. There are additional examples of preservation of של in similar settings. On the other hand, in other instances such spellings were separated in a way that accurately reflects the original version; for example, של ישנצות (Kelim 26.2).
32 Breuer, ibid., 130–132.
identification would beكشف without realisation of the יוד. This suggests that we must ignore the morphological pattern of the form and place it among the few examples attesting the phonological process of the dropping of א涞f and the creation of a glide consonant יוד, as in the qere of biblical יניאל and the proper name יניאל. In any event, the vocaliser of MS Cambridge wanted to preserve this rare form and vocalised both the juxtaposed ישות and the weakened glottal stop and its assimilation to final hireq.

That resh with shewa can turn the following bgd/kft letter into a fricative is a known phenomenon. Already found in the Bible, in MH it has multiple attestations, such as: דרבן, מרפק, גמלייל, among others. The tradition of MS Cambridge provides another example of the fricative realisation of a hapax in the Mishnah:

The Mishnah in Kilaim 5.4 states: קרם שחרב אם יש בו ללקט عشر גפנים לבית סאה ונטועות כהלכתן הרי זה נקרא כרם דל הוא נטוע ערבוביה if a vineyard became waste, but it is possible to gather in it ten vines, planted according to the rule in a seah’s space, this is called a poor vineyard, which is planted in an irregular manner’ (variants: Kaufmann: ערבוביה; Parma A: ערבוביה; Paris: ערבוביה).

With respect to the first of the two *bets*, this *hapax* has two vocalisation traditions in manuscripts of the Mishnah: one (Parma A) has *dagesh lene*; the other Cambridge (and Paris) indicates a fricative after the *resh*. In MS Kaufmann, we find signs of hesitation: the consonant *bet* has a faded *dagesh*, but closer examination of the word suggests that the *dagesh* was blotted close to its writing. On the other hand, MS Kaufmann does not mark *rafeh* over the *bet*. Perhaps the vocaliser of MS Kaufmann debated the matter and decided to take no steps, whereas the vocaliser of MS Cambridge used vocalisation to underscore the fricative *bet* in his tradition against the backdrop of another, opposing tradition that stresses the plosive *bet*, here represented by Parma A.

אֱדַיִין

The Mishnah in *Nedarim* 11.10 states: רבי יהודה אומ׳ אף המשיא את בתו קטנה אף על פי נטעלאמנה ואינה גרשה וחזרו אצלו אֱדַיִין היא נערה . "R. Judah says: also if one gave in marriage his daughter who was a minor, and she became a widow, or she was divorced and returned to him, and she was still a maiden’ (variants: Kaufmann: עֲדַֿיִין; Parma A: וְעַדַיִין; Paris: וַעַדַיִין.

36 For additional data, see Bar-Asher, *Morphology of Mishnaic Hebrew: Introductions and Noun Morphology*, vol. 2 (in Hebrew; Jerusalem: Bialik Institute, 2015), pp. 1498–1499. I also add a Genizah fragment (Birnbaum, *Mishna in the Cairo Geniza*, p. 166) which places a *dagesh* in the initial *bet*. In the Yemenite tradition the *ayin* is vocalised with *ḥireq*. See Yeivin, *Babylonian Vocalization*, p. 980, n. 10.

37 MS Paris generally marks *dagesh lene* (Bar-Asher, *Mishnaic Hebrew in the Communities of Italy*, p. 45).

38 I thank Emmanuel Mastéy for his assistance in reading the text.
Kutscher’s analysis, that the adverb עַדֵּין is composed of עַד + another element — the plural pronominal suffix (עםו/עם) or עדו/עדו — has been accepted in scholarship. As for the different forms, Kutscher proposed that the Hebrew word was borrowed from Akkadian adīni and that in Biblical Hebrew the initial alef became ayin, i.e., עדֵין, וּעדֵין, due to mistaken affinity, renewed by biblical scribes and MH, to Hebrew עד. This suggested circular process, in which עַדֵּין returns to its original source through a ‘mistaken’ folk etymology, seems somewhat convoluted. It is perhaps simpler to assume that what we have here is the known alef/ayin alternation in MH.

The textual witnesses are divided as to the first consonant of עַדֵּין: alef or ayin. The Genizah fragments analysed by Birnbaum attest exclusively to alef. MS Kaufmann and the Babylonian tradition tend toward alef, although forms with ayin are found there, whereas MS Parma B has both forms in equal distribution.

MSS Parma A and Cambridge of the Mishnah represent an opposite direction: the usual spelling there is עַדֵּין/עדֵּין, with a single exception that reads אֲדֵין. In other sources of MH the form with ayin is the dominant one, as shown by Yeivin, Sharvit, and Breuer. It appears that the uniqueness of the form with

41 In the Bible, the parallel word is with ayin: עדֵין, וּעדֵין. See Kutscher, Hebrew and Aramaic Studies, p. 450.
46 See Yeivin, Babylonian Vocalization, p. 1142; Sharvit, Phonology of Mishaic Hebrew, pp. 78–79; Breuer, Pesahim, p. 102. The parallel phrase אין is
initial *alef* in MH sources in general, and in MS Cambridge in particular, led to its vocalisation as a means of its preservation.

**MORPHOLOGY**

וּהי

The vocalisations in MS Cambridge are also found in verbal forms. Here I address only one instance. *Sanhedrin* 4.5 describes the process of questioning witnesses in capital cases:

How did they exhort the witnesses in capital cases? They brought them in and admonished them: “Perhaps you will state what is supposition, or rumour, [or] evidence from other witnesses, or [you will say:] ‘we heard it from (the mouth of) a trustworthy person’, or perchance you were not aware that we would test you by enquiry and examination; you must [וּהי] know that capital cases are not like cases concerning property [...] for thus have we found in the case of Cain who slew his brother, as it is said, thy brother’s blood cries.”

The verb in this mishnah belongs to a long declarative statement that quotes the threats uttered by judges to witnesses to ensure always written with *ayin*. See Yeivin, *Babylonian Vocalization*, p. 1142; Sharvit, *Phonology of Mishnaic Hebrew*, pp. 78–79; and Breuer, *Pesaḥim*, pp. 276–277.
that the latter give truthful testimony. The quote begins with ‘Perhaps you will state’ and concludes with a prooftext from the Bible and a halakhic midrash on the verse cited. As is characteristic of direct speech, it addresses the audience in the second person plural — אבותי, שתאמרו — and the speakers refer to themselves in first person plural — ויב 若要. This makes it certain that the verb היה, which is inserted in the direct speech, refers to the witnesses and functions as an imperative.47

The root היה is conjugated in two ways in MH: as II-yod form and as a II-waw form.48 For our mishnah all the manuscripts attest to the conjugation with yod,49 but are divided as to vocalisation: MSS Kaufmann and Paris place qameṣ in the first radical, as in the past tense,50 whereas MS Cambridge correctly vocalises it as the

47 In the printed editions, this verb became הוו, and in the Yemenite tradition as well; see Yitschak Shivti’el, “Massorot ha-temanim be-diqdqu leshon ha-mishna” (in Hebrew), in: Saul Lieberman et al. (eds.), Henoch Yalon Jubilee Volume on the Occasion of his Seventy-fifth Birthday (Jerusalem: Kiryat Sepher, 1963), pp. 338–359, at p. 348.

50 The imperative form of the root היה vocalised as a past tense form in MS Kaufmann occurs another time in this manuscript: ונתןلاحיבא דוד שּׁלשה, ‘Mosamaynu tovrish, אל תחרר אתיי ריבמ לּרְעָה יִשְׁמַע אֵין שָׁמֵא עד שָׁמֵא כָּה שָׁמֵא לִשְׁבוֹת, And whence [do we conclude] that three others were still to be brought? By logical conclusion, as it is said: “thou shalt not follow a multitude to do evil”, I infer that I am to be with them to do good’ (Sanhedrin 1.6). This is an isolated instance in which Parma A vocalises the yod with şere in an unvocalised section.
imperative. Given the consistent testimony of all the manuscript witnesses, I differ from Haneman, who contends that the original conjugation of the second person plural in the qal stem was only with waw, and that our example is an anomaly, perhaps even a graphic exchange of waw and yod.\textsuperscript{51}

Examination of the distribution of the roots הָיוְי/יוֹי in this pattern in MSS Cambridge and Kaufmann elicits an opposite picture from that found in Parma A. הָיו appears three times with yod (in our mishnah, in \textit{Aboth} 1.1, and in \textit{Aboth} 1.3), and היו only once (in \textit{Aboth} 2.3). In MS Kaufmann it appears three times with yod (once in our mishnah and twice in \textit{Aboth}).\textsuperscript{52} A similar picture also emerges from other sources.\textsuperscript{53} This contrasts with the second person singular that is usually found in the root יהוי.

In essence, not only did the vocaliser of MS Cambridge vocalise the word correctly, he was aware of both the problematic nature of this form and the alternative tradition יהוי. This is another example of how he underscores his tradition.\textsuperscript{54}

In this example too, the vocaliser of MS Cambridge diverges from all the other manuscripts. The Mishnah states in \textit{Eduyoth} 1.3:

\begin{quote}
מְלָא הִין
\end{quote}

\textsuperscript{51} Haneman, \textit{Morphology of Mishnaic Hebrew}, p. 387.
\textsuperscript{52} In \textit{Aboth} 2.3 there is an erasure (Bar-Asher, \textit{Studies in Mishnaic Hebrew}, vol. 2, p. 183), which has been corrected to יהו.
\textsuperscript{53} We find this in Maimonides’ version of the Mishnah (Zurawel, \textit{Maimonides’ Tradition of Mishnaic Hebrew}, p. 160). In the Babylonian tradition of the Mishnah there are two occurrences with yod in \textit{Aboth} (Yeivin, \textit{Babylonian Vocalization}, p. 721); Shimon Sharvit, \textit{Tractate Avoth Through the Ages: A Critical Edition, Prolegomena and Appendices} (in Hebrew; Jerusalem: Bialik Institute, 2004), pp. 63, 65, 83.
\textsuperscript{54} Note that MS Kaufmann evidences some hesitation in the writing of the mishna: there is a space before the verb יהו.
Hillel says: a “full” *hin* of drawn water renders the ritual bath of purification unfit. [The term “full” is used here] only because a man must employ the style of expression of his teacher’ (variants: Kaufmann: מְלָא הִין; Parma A: מַלֶּא הִין; Paris: מָלָא הִין).

Hillel’s statement and appended explanation that a person must employ his teacher’s style of expression have sparked much debate and varied interpretations in the relevant scholarship. The phrase מְלָא הִין presents the main difficulty, and the different traditions diverge in their understanding and realisation of this phrase, as seen from the variant readings cited above. Nonetheless, additional sources support the tradition represented in MS Cambridge, which reads the vowel *a* in the second radical.

Eliezer Shimshon Rosenthal treats this expression at length and has shown that we must follow the version found in Maimonides and an ancient interpretation from geonic responsa, which indicate that this is the active participle of an Aramaic form of the root מַלָּא meaning ‘to fill’, and is therefore connected neither to מָלָא nor to הִין.

The vocalisation מָלָא הִין is found in other sources, as Rosenthal notes. However, among the manuscripts of the Mishnah, MS Cambridge is the sole manuscript that has retained this reading.

In *Baba Kamma* 10.2 we find the following statement:

57 See the comprehensive discussion of this mishnah, ibid., pp. 359–374.
If he caused any damage, he must pay for the damage which he has caused; but he may not cut off any branch of his, even on condition of paying therefor. R. Ishmael the son of R. Jochanan ben Baroka says: he may even cut if off and pay for it’ (variants: Kaufmann: סוכָה; Parma A: סוכָה; Paris: סוכָה).

In its meaning of ‘large branch’ (as opposed to ‘temporary shelter for shade’) סוכה appears once in the Bible: שׂוֹכַת עֵצִים (Judg. 9.48), and five times in the Mishnah (Makhshirin 1.3; Zabim 3.1, 3.3, 4.3, and in our mishnah). In the mishnah in Baba Kamma, where the word appears for the first time, MSS Cambridge and Parma A vocalise it סוכָה. Note that in Parma A this word appears in a long continuous section of unvocalised text; nevertheless, the vocaliser of Parma A chose to vocalise this word alone, affirming its unique tradition.

In MS Kaufmann, on the other hand, the entire line from המה שהיזיק to סוכה is unvocalised. In the facsimile edition there is a dagesh in the kaf of סוכה; in the scanned MS, however, there is no dagesh. The Arukh (s.v. סָך) also attests to the version without dagesh in Baba Kamma and connects it to biblical שוכה. As Bar-Asher notes, Parma B always reads סוכה; סוכָה and Paris סוכָה is also attested by the vocaliser of MS Kaufmann (in Makhshirin) and K₂ (i.e., the second vocaliser, ‘Kaufmann 2’, in Zabim).

These are, in effect, two nouns that appear in MSS Cambridge, Parma A, and Parma B, where a distinction is made between סוכָה ‘branch’ and סוכָה ‘shelter’, whereas MSS Kaufmann (once), K₂, and Paris unite the two nouns in the common פֻּעָה pattern. What

---

58 Alongside the masculine יָזכָה (Judg. 9.49).
59 There are additional examples of sporadic vocalisations that are shared by Parma A and Cambridge.
60 Bar-Asher, Morphology of Mishnaic Hebrew, p. 1167. In Parma A the other occurrences are not vocalised.
61 For additional attestation to the vocalisation סוכָה, see ibid.
emerges from this consideration is that the sole witness to סוכה in this meaning of ‘branch’ is found once in the vocalised version in MS Kaufmann; all the other witnesses are from second-rate manuscripts.

Bar-Asher thinks that this is not an indication of a mistake on the part of the vocalisers, but rather root or pattern alternations (סוך-סכך; pattern alternation: פולה-פּעה). But given the quality and number of witnesses to סוכּה, this suggests that the testimony of the manuscripts that distinguish between סוכה and סוכּה represents an original, reliable tradition, whereas the unifiers blurred (in a natural, early or late process) the distinction between two close but different meanings. In any event, MS Cambridge highlights the fricative version.

הספר

Another noun for which the traditions of Mishnaic Hebrew reflect different patterns is הספר. Its vocalisation twice in MS Cambridge witnesses its vocaliser’s adherence to his task of elucidating his tradition.

One occurrence is in Mishnah Kelim 14.5: ‘When does a sword become susceptible to uncleanness? When it is burnished. And [when is] a knife [susceptible to uncleanness]? [Immediately] after it has been sharpened’ (variants: Kaufmann: הָסִיף, Parma A: הָסֵּיף, marginal correction: הָסִיףֿ; Parma B: הָסֵּיףֿ; Paris: הָסִיףֿ).

---

63 Epstein, Introduction to the Mishnaic Text, p. 1241, cites this example in his linguistic description, linking it to other nouns whose historical pattern is not identical to סיף.
The second occurrence is in Mishnah *Kelim* 16.8: ‘The sheath of a sword, or of a knife, or of a dagger... [all] these are susceptible to uncleanness’ (variants: Kaufmann: הַסַּייף; Parma A: הַסִּיף; Parma B: הַסָּיִף; Paris: הסיף).

This noun appears seven times in the Mishnah: in five of these occurrences MS Cambridge’s version is *plene* with a single *yod*; it is written defectively twice. The manuscripts of the Mishnah attest to two patterns for this noun: the segholate pattern with the extended diphthong קַיִל, and its contracted diphthong קֵל, similar to the nouns לַיִל,לֵיל,חַיִל,חֵיל.

Since the material has already been analysed by Bar-Asher, I restrict my discussion to mapping the distribution of the forms in the various manuscripts vis-à-vis MS Cambridge.

One tradition (the scribe of MS Kaufmann and MS Paris) attests only the pattern קַיִל and is familiar mainly with the double-*yod* spelling. A second tradition (Parma B, and MS Kaufmann in *Kelim* 14.5, where, it seems, an original הַסַּייף was later corrected to הסיף) attests the contracted form סֵיף. The third (Parma A) knows both alternatives and the three spellings.

It is difficult to identify the tradition reflected in MS Cambridge. On the one hand, it underscores the defective spellings by vocalising them with *sere*, and the *plene* always has one, not two, *yods*. On the other hand, because of this manuscript’s preference for defective spelling, a single *yod* could be understood as an extended diphthong. Perhaps the double vocalisation in this...
manuscript attests only to the contracted diphthong, but this is not certain.

מש_clone

The Mishnah in Aboth 4.15 states: ר נא אומרי אני ביריה לאمشולה הרשעים ואוף לא מסיה לבアイים.
R. Jannai said: it is not in our power to explain either the prosperity of the wicked or the tribulations of the righteous’ (variants: Kaufmann: משלוו; Parma A: משلاقة; Paris: משלאה).

This noun appears in late biblical literature (Jeremiah, Ezekiel, Daniel, Psalms, and Proverbs) and only occasionally in Tannaitic literature. Its sole appearance in the Mishnah is in tractate Aboth. It is conjugated in two close segholate patterns: qatla and qitla. MS Cambridge vocalises it in the qitla pattern, similar to the Babylonian tradition of the Bible, which reads שלוה.

Although qatla–qitla alternations are known from different strata of Hebrew, the documentation of an eastern variant in the ostensibly western MS Cambridge is of interest.

68 See Maagarim (http://maagarim.hebrew-academy.org.il).
69 On the alternation of these patterns, see Yeivin, Babylonian Vocalization, pp. 817, 863–864.
70 Alongside שלוה. See ibid., p. 871.
71 Sharvit, Tractate Avoth, p. 164.
73 Mention should be made of יהוה, which is attested in the pre-Ashkenazic tradition (with no parallels); see Eldar, ibid.
ORTHOGRAPHY: HOMOGRAPHS

Another sphere that invites vocalisation is that of orthography. As noted above, MS Cambridge is largely unvocalised. Moreover, it consistently adheres to defective spelling, not only in closed but also in open syllables. Defective spelling inevitably creates homographs; we therefore find the use of vocalisation to distinguish between them. Vocalisation can also serve to refine a discussion or a textual reading. A significant example comes from Abodah Zarah, in which three words in the same mishnah are vocalised.

The Mishnah in Abodah Zarah 2.5 states: 

He said to him: Ishmael, my brother, how dost thou read: “for thy (m) love is better than wine”or “for thy (f) love is better...”? He replied: “for thy (f) love”is better. [R. Joshua] said to him: this is not so, for, behold, its fellow [verse] teaches regarding it: “thine (m) ointments have a goodly fragrance”.

Variants:

1. דודיך: Kaufmann: דודך; Parma A: דודך; Paris: דודיך.
2. דודייך: Kaufmann: דודייך; Parma A: דודייך; Paris: דודייך.
3. דודי: Kaufmann: דודי; Parma A: (lacking); Paris: דודי.

74 Henshke, “Orthography”.
75 See above, the discussion on חדש חדש.
The vocalisation of the homographs serves to pinpoint the topic under discussion in this mishnah. Rabbi Joshua asks Rabbi Ishmael’s opinion as to the correct reading of Song of Songs 1.2, focusing on the possessive suffix of the noun דודים: is it masculine or feminine? The discussion in the mishnah is somewhat charged with respect to the transmission of the biblical text, because Rabbi Ishmael’s answer reflects a tradition opposite that of the Masoretic Text, which has the masculine form.

MS Cambridge further focuses the debate by vocalising all three forms, including the one in Rabbi Ishmael’s statement. MS Parma A uses *plene* for the feminine form דודייך as a means of distinguishing between the homographs, whereas the vocaliser of MS Paris vocalises Rabbi Ishmael’s answer (the third occurrence) as masculine, like the Masoretic Text.

The Mishnah in *Menahoth* 13.7 states: \[만 הבמה ומתי יידת מה פרשתי \] [If he say]: “I clearly stated [what kind] of cattle, but I do not recollect which I said expressly”, he must bring a bullock and a heifer, a he-calf and a she-calf, a ram and a ewe [two years old], a male kid and a female kid [one year old], a he-goat and a she-goat [two years old], and a young ram and a ewe-lamb’ (variants: Kaufmann: טלה וטַלַה; Parma A: טלה וטָלָה; Paris: טָלֵה וְטָלָה).

The feminine form יָלָה is a hapax in the Mishnah. In MSS Cambridge, Kaufmann, and Parma A it appears in the pattern, like נָאָה. MS Paris has shewa in the first radical, whereas the Yemenite tradition and the printed editions, both early and late, have a noun that differs consonantally: טְלִי.\textsuperscript{77}

Examination of the manuscripts of the Mishnah and of various traditions suggests we are dealing with two separate patterns, which resulted in suppletion: on one hand, טָלֶה (ms), טָלָה (fs), טָלִים (pl), based on the pattern of יָפֶה (ms), יָפֶה (fs), יָפִים (pl), and on the other hand, טְלֶה (ms), טְלֵה (fs), טְלִים (pl), based on the pattern of גְּדִי (ms), גְּדִיה (fs), גְּדָיִים (pl).\textsuperscript{78}

The first pattern is seen in the BH and MH masculine form טָלֶה, and the feminine form טָלָה is attested in reliable manuscripts of the Mishnah, as presented above. The plural form טָלִים is found three times in MS Parma A (in Tamid 3.3), but is also attested by the scribe of MS Kaufmann. Although this scribe generally uses the plene form with consonantal yod,\textsuperscript{79} in this case he almost uniformly writes טְלִים defectively (five of six occurrences).\textsuperscript{80} The defective form is also found at Qumran, in both biblical and non-biblical texts, and even in MS Leiden of the Palestinian Talmud and MS Munich of the Babylonian Talmud.\textsuperscript{81}

---

\textsuperscript{77} For details, see Bar-Asher, \textit{Morphology of Mishnaic Hebrew}, p. 831.

\textsuperscript{80} For details see Bar-Asher, \textit{Morphology of Mishnaic Hebrew}, p. 831.

\textsuperscript{81} For the Qumran material, see Abegg et al., \textit{The Dead Sea Scrolls Concordance} (Leiden and Boston: Brill, 2003–2010), vol. 1/1, p. 284, vol. 3/1, p. 272;
Additional evidence for this pattern comes from the plural declension found once in the Mishnah. The phrase לְשׁוןָ תֶּלֶה קָרְבָּן (Middoth 1.6), with the biblical plural, is found in the printed editions; in the manuscripts, however, it is declined according to the first pattern: MS Parma A reads תֶּלֶה קָרְבָּן, which can be interpreted as an orthographic alternation between the -י and -ה suffixes.82 Note that Parma A vocalises this word, even though it appears in an unvocalised section of the manuscript. This isolated instance of vocalisation highlights the rare form. In MSS Kaufmann and Paris a similar version was preserved, but with a *lamed/resh* alternation: תֶּרֶרּ קָרְבָּן.83

The second pattern is represented mainly by the biblical plural form טלאים and the Mishnaic Hebrew form טליים. The latter is the tradition adhered to consistently by the vocaliser of MS Kaufmann (see above). This form appears four times in MS Cambridge84 and in Parma A as well.85 Note that the scribes of MSS Cambridge and Kaufmann attest טלאים in the same tractate (Bekhoroth 5.3). Perhaps we can consider the singular form תֶלֶה from our mishnah as belonging to this pattern according to MS Paris, and interpret it as an authentic but rejected vestige of this pattern.86

---

82 Epstein, *Introduction to the Mishnaic Text*, pp. 1251–1252, treats the opposite alternation: *heh > yod*.

83 MS Kaufmann emends to טדֶרּ. See Bar-Asher, *Morphology of Mishnaic Hebrew*, p. 831. This mishnah is cited in b.Yoma 15b and has variants there (cited according to the Sol and Evelyn Henkind Talmud Text Database): טֶלֶה (MS Munich, Munich 6, Oxford 366, and Vatican 134); טֶלֶה (MS London 400 and a segment of St. Peterburg RNL Yevr. IIA293.1); טלָאֵים (Yemenite MS, NY, JTS Enelow 270).

84 Arakhin 2.5; Tamid 3.3 (three times). תֶלֶה appears once (Bekhoroth 1.3) and the other occurrence is, as noted, טלָאֵים (Bekhoroth 5.3).

85 Vocalised three times (Bekhoroth 1.3, 1.5; Arakhin 2.5), and spelled once plene unvocalised: טליים (Arakhin 2.5).

86 Even though the feminine טֶלֶּה remains anomalous.
Studies in Rabbinic Hebrew

We therefore have here two pattern systems that have already undergone suppletion in the Bible: טָלה-טָלאים. In the Mishnah, however, the conjugation of טָלה expanded and is found in the feminine and in the plural forms. In Palestinian Aramaic we find טָלי-טָלייה-טָליין. 87 This reveals the struggle between the two patterns. Although טָלאים and טָליים are supported by the Bible and by Aramaic, the forms טָלה-טָלה-טָלִים continued to exist. With respect to the forms טָלִיה and טָלִיָּה, found in the Yemenite tradition and the printed editions, respectively, it is difficult to determine if they were created by analogy to the second, dominant pattern or reflect an early tradition.

Ketiv and Qere

Another characteristic of MS Cambridge is the small number of corrections. The manuscript was penned by one or two scribes with an eye to penmanship and design; it appears, however, that, following its completion, the manuscript was set aside and not studied. 88 The few corrections made during the writing process are attested here and there in delicate signs of erasure, 89 or superlinear dots that mark incorrect word order. 90

88 This was the conclusion reached by Malachi Beit-Arié after examining a photograph of the manuscript. I thank him for his time and effort.

89 E.g., in the sentence כל המחלק נטלין بشנה ונזרים ונחללים ונצלים לוחך ועשתו לינוּך (Shabbath 17.4), the words ובשנה ונזרים ונחללים ונצלים לוחך are crossed out.

90 E.g., on the word המחלקה (Pesahim 4.1) dots indicate that the waw and lamed should be interchanged; in על המקוֹב (Oholoth 18.5) dots indicate that התי and נב should be interchanged.
Marginal notes mentioning variants\(^{91}\) and additions of words or letters above the line by the scribe\(^{92}\) are also found sporadically in the manuscript. For the most part, the scribe took care not to make corrections or erase textual variants. I argue that the scribe used vocalisation to resolve the conflict between his desire to adhere closely to a particular *nusah*, on the one hand, and the need to correct it, on the other hand. Indeed, there are instances of *ketiv* and *qere* in MS Cambridge.

The Mishnah in *Terumoth* 3.7 states:

> ומנין שיקדמו הביכורים לתרומה הז קרוי תרומה וראשית וזה קרוי תרומה וראשית אלא יקדמו הביכורים שהן ביכרים לכל ותרומה לראשון שהיא ראשית ומעשר ראשון לשני שיש בו ראשית.

And whence that first-fruits come before priest’s-due? after all, the one is called priest’s-due and the first, and the other is called priest’s-due and the first. But first-fruits come first because they are the first-fruits \([בכרים]\) of all produce; and priest’s-due precedes first tithe since it is termed first; and first tithe before second because it includes the first.

Variants: Kaufmann: בכורים; Parma A: בכריים; Paris: בכרים

The word \(בכרים\) in this mishnah indicates antecedence, in this case the first of the first-fruits. MSS Cambridge, Parma A, and Paris vocalise it as the plural active participle, which is in harmony with the syntactic context of the mishnah (it was also vocalised thus by Joseph Ashkenazi ‘according to a manuscript’

---

\(^{91}\) E.g., \(נ״א מקודש\) \((Nazir 5.3)\).

\(^{92}\) E.g., \(נמר [אתר] ל琛 הפרשה\) \((Yebamoth 12.6)\).
as cited in Melekhet Shlomo ad loc.). MS Kaufmann, on the other hand, presents the spelling and vocalisation בִּכּוּרִים, ostensibly an expansion of its meaning of ‘the result of an action’.

The version in MS Cambridge, with yod in the first syllable, may represent a vocal shewa spelled plene, but this seems unlikely.\(^9^3\)

It may also reflect indecision as to the correct version: that of MS Kaufmann (vocalising the initial syllable with yod) or the versions that appear reasonable based on the context and other manuscripts (defective spelling in the second syllable). Here the vocaliser settled matters without intervening in the consonantal text.

The Mishnah in \textit{Tohoroth} 4.10 states:

ר’ יוסי אומ׳ ספק משקים לאכלים ולכלים טהורどのように ת_sfש two casks, one unclean and the other clean, and one kneaded dough [with the water] from one of them, [and there is] a doubt whether he kneaded [it with the water] from the unclean [טומאה] [cask or water] from the clean one, this is [a case of] doubt whether [unclean] liquid [touched clean] foodstuffs, these become unclean, but [in the case of clean] utensils, these remain clean.

Rabbi Jose says: if there be a doubt whether [unclean] liquid [touched clean] foodstuffs, these become unclean, but in the case of [clean] utensils, these remain clean. Thus, if there were two casks, one unclean and the other clean, and one kneaded dough [with the water] from one of them, [and there is] a doubt whether he kneaded [it with the water] from the unclean [טומאה] [cask or water] from the clean one, this is [a case of] doubt whether [unclean] liquid [touched clean] foodstuffs, these become unclean, but [in the case of clean] utensils, these remain clean.

Variants: Kaufmann: טומאה; Parma A: הטומאה; Parma B: הטומאה; Paris: הטומאה.

\(^9^3\) There are isolated examples of plene spelling for vocal shewa, but most are given to alternative explanations.
This mishnah deals with the purity or impurity of liquids, and sets the Halakhah — pure or impure — for various situations. In this instance, we have two casks, one of which is pure; the other is impure. The continuation ‘kneaded dough from one of them’ refers to the casks mentioned in the previous sentence. The second phrase concerning the doubt as to whether the water came from the pure cask also leads to this conclusion. The expected version טמאה does appear in MSS Parma A, Parma B, and Paris, but MSS Cambridge and Kaufmann have an identical example of ketiv and qere: the ketiv is הטומאה and the qere is הטמאה.

Ketivim of טמאה as טמא appears in six other places in MS Kaufmann (Kelim 10.8; Negaim 6.2, 13.8; Tohoroth 4.10, 6.3, 6.4), and also in MS Vatican 60 of Sifra we find מטמא לטהרה מטהורה לטמא, with the waw in the last word crossed out.

The many occurrences in MS Kaufmann, whose version is supported by MSS Cambridge of the Mishnah and Vatican of Sifra, clearly testify to a stable tradition of טמא in the sense of טמאה and negate the argument that this is a mistake or simply a copyist’s error.

This is another example of a common phonological phenomenon in Mishnaic Hebrew: variation before a labial consonant and the realisation τομε’α as τουμε’α. This variation often takes place in Mishnaic Hebrew between vowels, usually in closed syllables. This word, however, provides evidence of the variation of an ultra-short vowel (vocal shewa) before a labial consonant. But additional sources from this period attest to vowel variation in this position: the Isaiah Scroll from Qumran, Palestinian Aramaic dialects, and Greek transcriptions,

94 Bar-Asher, Morphology of Mishnaic Hebrew, p. 779, already noted three occurrences, to which I have supplied an additional three.
Studies in Rabbinic Hebrew as Kutscher has shown. Thus, in Mishnaic Hebrew the influence of labial consonants extended to ultra-short vowels.

FOREIGN WORDS

Any discussion of the vocalisation in MS Cambridge must address the scribe-vocaliser’s treatment of foreign words. Some 10 percent of the vocalised words belong to this category and they are mainly Greek words. This phenomenon is important, as is the vocalisation of these words, because it may assist identification of the precise region in Byzantium where the scribe-vocaliser resided. To date, however, it has proven impossible to identify the specific locale.

This differs from what we find in other manuscripts of the Mishnah: in MS Paris, for example, most of the unvocalised words are foreign, which suggests ‘that he did not know how to read them’. In contrast, the vocaliser of MS Cambridge chose to vocalise these words specifically; moreover, his vocalisation represents a tradition that can at times differ in terms of spelling and vocalisation from the tradition of other manuscripts of the Mishnah. Two examples follow.

The Mishnah in Sotah 7.8 states: they prepared for him [sc. the king] in the Temple Court a

97 I chanced on another example of the variation of shewa before labials in MS Kaufmann: שְ(ו)מָרָיו in the meaning of שמרים ‘yeast’ (*Baba Metzia* 4.11). MSS Cambridge and Parma A have the usual version שָמָרָיו.

platform of wood and he sat thereon’ (variants: Kaufmann: בָּבָם; Paris: בָּבָם; Genizah fragment T-S E1.97: בָּבָם). 99

The origin of this noun is the Greek βῆμα. 100 Most of the rabbinic sources that vocalise this word attest to hIREq in the first syllable, 101 with the exception of its rare vocalisation with an e-vowel in MS Cambridge and a Genizah fragment.

In his discussion of loanwords, Heijmans describes the realisation of the Greek vowel η over time and determines that it was pronounced [e] in the Hellenistic-Roman period, but that a shift from [e] to [i] took place in Byzantine times. He sees the pronunciation with hIREq as reflecting a late realisation of the Greek η. 102 Thus MS Cambridge reflects an earlier form as compared to those found in other manuscripts.

וְהַמִלְפְפְוֹן

The Mishnah states in Kilaim 1.2: הוֹקְשֹׁת וְהַמִלְפְפְוֹן אינן כלאים זה בלאו, ‘cucumber and cucumber-melon are not forbidden junction one with the other’ (variants: Kaufmann: כָּרְפָּלוֹן; Parma A: חָרְפָּלוֹן; Paris: כָּרְפָּלוֹן).

The source of this noun is the Greek μηλοπέπων. 103 Here, as in the previous example, we also have the letter eta. MSS Kaufmann and Parma A vocalise the initial syllable with a, whereas MS

99 For the Genizah fragment see also Birnbaum, Mishna in the Cairo Geniza, p. 300.
102 Ibid., pp. 264–265.
Cambridge has \( i \). The realisation \( a \) for Greek \( \eta \) is strange, and apparently represents a development later than the realisation with \( i \).\(^{104}\) Heijmans argues that the person who vocalised with \( i \) knew the Greek word as pronounced after the Greek \([e] > [i]\) shift. In any event, the \( \textit{ḥireq} \) found in MS Cambridge has a basis in a known process that took place in Greek and seems to reflect knowledge of this form.

**CONCLUSION**

I have presented here only a fraction of the vocalised words scattered throughout MS Cambridge of the Mishnah. I have attempted to demonstrate that these select examples reflect deliberate choices on the vocaliser’s part. MS Cambridge shares some superior traditions — as reflected in the words טמאה-תומאה, טה, בכר, חוף, וה ALOG, אדית, תhma — with Italian manuscripts; others, such as היו, לעזר, מלאין, רופים, בימה, and מילפפון, are uniquely Byzantine. In addition, we have seen that, despite its relatively late date, MS Cambridge reflects a superior, Byzantine tradition of MH, which is supported by the witnesses of the Italian tradition, MSS Kaufmann, and Parma A. On the other hand, we have also seen that the Byzantine tradition has unique features that are undoubtedly early and accurate. This enables us to add to our knowledge a hidden, ancient Palestinian tradition that circulated in Byzantium. This independent tradition evidences affinity to the other extant, superior sources of Mishnaic Hebrew.
