List of Boxes	xix
Foreword	xxv
Preface	xxvii
Scope	xxvii
Taxonomy and the IUCN Red List categories	xxviii
Organisation of the book	xxix
Bibliography	xxx
Acknowledgements	xxxi
List of Acronyms	xxxiii

1. What is Conservation Biology?

1.1. Conservation Biology is Still Evolving	3
1.2 The Role of Conservation Biologists	7
1.3 The Value of Scientific Methods	9
1.4 Environmental Ethics	12
1.4.1 Conservation biology's ethical principles	16
1.5 Summary	18
1.6 Topics for Discussion	19
1.7 Suggested Readings	19
Bibliography	20

2. Introduction to Sub-Saharan Africa

2.1 Sub-Saharan Africa's Natural Environment	24
2.2 History of Conservation in Sub-Saharan Africa	29

2.2.1 The 1800s and launching of formal conservation efforts	33
2.2.2 Conservation efforts after colonialism	36
2.3 Conservation in Sub-Saharan Africa Today	37
2.4 Ongoing Conservation Challenges	44
2.4.1 Persistent poverty	44
2.4.2 Obstructive mindsets	46
2.4.3 Weak governance/institutional structures	47
2.4.4 Skills shortages	51
2.4.5 Competing interests	52
2.5 Conclusion	53
2.6 Summary	53
2.7 Topics for Discussion	54
2.8 Suggested Readings	54
Bibliography	55

3. What is Biodiversity?

3.1 Species Diversity	62
3.1.1 What is a species?	64
3.2 Genetic Diversity	65
3.3 Ecosystem Diversity	69
3.4 Patterns of Biodiversity	71
3.4.1 Challenging species identifications	72
3.4.2 Implications of challenging species identifications	73
3.4.3 Measuring species diversity	79
3.4.4 How many species exist?	81
3.4.5 Where are most species found?	82
3.5 Summary	85
3.6 Topics for Discussion	86
3.7 Suggested Readings	86
Bibliography	87

4. Why Should We Protect Biodiversity?

4.1	Material Contributions	93
4.2	Regulating Services	96
4.2.1	Maintaining ecosystem stability	96
4.2.2	Maintaining ecosystem productivity	99
4.2.3	Climate regulation	99
4.2.4	Conserving soil and water quality	100
4.2.5	Pollination and seed dispersal	101
4.2.6	Hazard detection and mitigation	105
4.2.7	Pest and disease control	106
4.3	Nonmaterial Contributions	112
4.3.1	Inspiration and learning support	112
4.3.2	Supporting psychological and physical experiences	114
4.3.3	Supporting individual and group identities	116
4.4	The Long-Term View: Option Values	117
4.5	Environmental Economics	118
4.5.1	Placing a price on the natural world	119
4.5.2	Environmental economics' biggest contributions	120
4.5.3	Environmental economics' biggest challenges	121
	<i>Accounting for negative externalities</i>	121
	<i>Determining ownership</i>	122
	<i>A more inclusive approach</i>	123
4.6	Summary	124
4.7	Topics for Discussion	124
4.8	Suggested Readings	125
	Bibliography	126

5. The Scramble for Space

5.1	What is Habitat Loss?	134
5.1.1	What is habitat fragmentation?	138
5.1.2	What are edge effects?	140
5.2	Drivers of Habitat Loss and Fragmentation	142

5.3	Habitat Loss' Impact on Africa's Ecosystems	145
5.3.1	Tropical forests	145
5.3.2	Rivers and deltas	148
5.3.3	Wetlands	149
5.3.4	Seasonal drylands	153
5.4	Population Growth and Consumption?	156
5.5	Concluding Remarks	159
5.6	Summary	160
5.7	Topics for Discussion	160
5.8	Suggested Readings	161
	Bibliography	161

6. Our Warming World

6.1	Drivers of Climate Change	168
6.2	Predicting Earth's Future Climate	173
6.3	The Impact of Climate Change	175
6.3.1	Climate change's impact on people	176
6.3.2	Climate change's impact on terrestrial ecosystems	178
	<i>Climate change on mountains</i>	178
	<i>Climate change in the lowlands</i>	178
	<i>Climate change and dispersal limitations</i>	182
	<i>Climate change and biological interactions</i>	182
	<i>Climate change and reptiles</i>	184
6.3.3	Climate change's impact on freshwater ecosystems	184
	<i>Warmer rivers and streams</i>	184
	<i>Changing flow regimes</i>	185
6.3.4	Climate change's impact on marine ecosystems	185
	<i>Ocean acidification</i>	186
	<i>Sea level rise</i>	187
	<i>Coral bleaching</i>	187
	<i>Ocean deoxygenation</i>	188
6.3.5	Climate change interacts with habitat loss	188
6.4	Beneficiaries of Climate Change	189

6.5 The Overall Impact of Climate Change	192
6.6 Summary	193
6.7 Topics for Discussion	194
6.8 Suggested Readings	194
Bibliography	195

7. Pollution, Overharvesting, Invasive Species, and Disease

7.1 Pollution in Its Many Forms	204
7.1.1 Water pollution	207
7.1.2 Air pollution	212
7.1.3 Soil pollution	213
7.1.4 Light pollution	214
7.1.5 Noise pollution	216
7.1.6 Thermal pollution	216
7.2 Overharvesting	218
7.2.1 The Bushmeat Crisis	218
7.2.2 Overfishing	220
7.2.3 The impact of traditional medicine	223
7.2.4 The impact of live animal trade	224
7.2.5 Overharvesting of plant products	226
7.2.6 Challenges in managing overharvesting	226
7.3 Persecution	230
7.4 Invasive Species	231
7.4.1 Spread of invasive species	231
7.4.2 Impact of invasive species	235
7.4.3 Genetically modified organisms	237
7.6 Parasites and Diseases	238
7.7 Summary	242
7.8 Topics for Discussion	243
7.9 Suggested Readings	244
Bibliography	244

8. Extinction Is Forever

8.1 What is Extinction?	259
8.2 Rates of Extinction	259
8.3 When is a Species Extinct?	260
8.4 History of Extinctions in Sub-Saharan Africa	263
8.5 Which Species are at Risk of Extinction?	271
8.5.1 Course-filter assessments	274
8.6 Characteristics of Threatened Species	274
8.7 Problems of Small Populations	277
8.7.1 Loss of genetic diversity	277
<i>Genetic drift</i>	277
<i>Inbreeding depression</i>	278
<i>Outbreeding depression</i>	280
<i>Population bottlenecks</i>	281
8.7.2 Demographic stochasticity	281
8.7.3 Environmental stochasticity and catastrophes	282
8.7.4 The extinction vortex	284
8.7.5 Is there any hope for small populations?	285
8.8 Is De-extinction a Solution?	285
8.9 Summary	289
8.10 Topics for Discussion	289
8.11 Suggested Readings	290
Bibliography	291

9. Applied Population Biology

9.1 Monitoring Population Size	299
9.1.1 Biodiversity inventories	299
9.1.2 Population censuses	302
9.1.3 Demographic studies	306
9.1.4 Recent progress in collecting survey data	308
9.2 Estimating Extinction Risk	309
9.2.1 A word of warning	310
9.2.2 Probability of extinction	310

9.2.3	Minimum viable population	311
9.2.4	Effective population size	313
9.2.5	Maximum sustainable yield	314
9.2.6	Sensitivity analysis	317
9.3	Challenges to PVA Implementation	318
9.3.1	Lack of adequate data	318
9.3.2	Data reliability	319
9.3.3	Model reliability	319
9.4	Summary	320
9.5	Topics for Discussion	320
9.6	Suggested Readings	321
	Bibliography	322

10. Conserving Ecosystems

10.1	Ecosystem Monitoring	328
10.1.1	Monitoring ecosystems with geospatial analysis	332
10.2	Maintaining Complex and Adaptive Ecosystems	337
10.2.1	Maintaining critical ecosystem processes	338
	<i>The water cycle</i>	338
	<i>The nutrient cycle</i>	339
	<i>The energy cycle</i>	340
	<i>Community dynamics</i>	341
	<i>Fire Dynamics</i>	341
10.2.2	Minimising external threats	343
	<i>Controlling invasive species</i>	344
10.2.3	Adaptive management	349
10.2.4	Being minimally intrusive	353
10.3	Restoring Damaged Ecosystems	354
10.3.1	Ecological restoration approaches	355
10.3.2	Major restoration targets	357
10.3.3	The future of ecological restoration	362
10.4	Combatting Climate Change Through Ecosystem Conservation	363
10.5	Summary	364

10.6 Topics for Discussion	365
10.7 Suggested Readings	366
Bibliography	366

11. Preventing Extinctions

11.1 Studying Species and Populations	376
11.1.1 Obtaining natural history data	380
11.2 Saving Species Through Translocations	384
11.2.1 Important considerations for translocations	384
<i>Determining need and feasibility</i>	385
<i>Support from local stakeholders</i>	385
<i>Identifying suitable habitat</i>	386
<i>Considering genetics and behaviour</i>	388
<i>How many individuals to release</i>	388
<i>Preparing individuals for release</i>	391
<i>Post-release monitoring</i>	394
<i>Helping other translocation projects</i>	394
11.3 Managing and Facilitating Movement Dynamics	395
11.3.1 Connectivity in terrestrial ecosystems	396
11.3.2 Connectivity in freshwater ecosystems	402
11.3.3 Connectivity in marine ecosystems	402
11.3.4 Mimicking connectivity	403
11.3.5 Management considerations in connectivity conservation	403
11.4 Managing Species Sensitive to Climate Change	404
11.5 Ex Situ Conservation Strategies	406
11.5.1 Types of ex situ facilities	409
11.5.2 Challenges facing ex situ facilities	411
11.6 Thoughts on Neglected Taxa	413
11.7 Summary	417
11.8 Topics for Discussion	418
11.9 Suggested Readings	418
Bibliography	419

12. Biodiversity and the Law

12.1 Identifying Legislative Priorities	428
12.2 Environmental Laws and Policies	430
12.2.1 International agreements	430
12.2.2 National and local laws	435
12.3 Environmental Law Enforcement	439
12.3.1 New technologies in environmental law enforcement	440
12.4 The Limits of Environmental Laws and Regulations	448
12.4.1 Lack of capacity	449
12.4.2 Conflicting government priorities	449
12.4.3 Informal economies, traditional activities, and the law	450
12.4.4 Trade embargoes and sanctions	451
12.5 Conclusion	452
12.6 Summary	455
12.7 Topics for Discussion	455
12.8 Suggested Readings	456
Bibliography	457

13. The Importance of Protected Areas

13.1 Establishing Protected Areas	462
13.1.1 Government protected areas	463
13.1.2 Community conserved areas	464
13.1.3 Privately protected areas	464
13.1.4 Co-managed protected areas	465
13.1.5 Field stations and marine laboratories	466
13.2 Classification of Protected Areas	466
13.3 Prioritisation: What Should be Protected?	469
13.3.1 Species approach	471
13.3.2 Ecosystem approach	471
13.3.3 Wilderness approach	472
13.3.4 Hotspot approach	472
13.3.5 Gap analysis approach	474

13.3.6 Optimisation approach	478
13.4 How Much Land Should We Protect?	478
13.4.1 A neglected system: marine protected areas	480
13.5 Designing Protected Areas	480
13.5.1 What size should a protected area be?	483
13.5.2 Zoning as a solution to conflicting demands	486
13.5.3 Connectivity among protected areas	492
13.5.4 What about small isolated reserves?	493
13.6 Managing Protected Areas	494
13.6.1 The importance of monitoring	495
13.6.2 The importance of working with local people	496
13.6.3 The importance of accommodating visitors	498
13.6.4 The IUCN Green List of Protected Areas	499
13.7 Challenges for Protected Areas	500
13.7.1 Funding limitations	501
13.7.2 Planning for climate change	502
13.7.3 Facing degazettement	502
13.8 Summary	503
13.9 Topics for Discussion	504
13.10 Suggested Readings	504
Bibliography	505

14. Conservation on Unprotected Lands

14.1 Human-Dominated Landscapes	516
14.1.1 The impact of agriculture	525
14.1.2 The impact of logging, mining, and other extractive industries	530
14.2 Smart Development Outside Conservation Areas	532
14.3 Linking Conservation to Socio-Economic Development	534
14.4 Confronting Human-Wildlife Conflict	539
14.4.1 Dealing with predators	540
14.4.2 Dealing with crop raiders	541
14.4.3 Concluding thoughts on human-wildlife conflict	542
14.5 Summary	542

14.6 Topics for Discussion	543
14.7 Suggested Readings	544
Bibliography	545
15. An Agenda for the Future	
15.1 Achieving Sustainable Development	556
15.2 Dealing with Technological Advances	558
15.3 Funding Conservation Activities	562
15.3.1 How effective is conservation funding?	564
15.4 Building Lasting Partnerships	568
15.4.1 Partnerships with local people	569
15.4.2 Partnerships among conservation professionals	573
15.5 Environmental Education and Leadership	574
15.6 Summary	579
15.7 Topics for Discussion	580
15.8 Suggested Readings	580
Bibliography	581
Appendix A	589
Selected Sources of Information	
Appendix B	593
Selected Environmental Organisations	
Appendix C	607
Obtaining Conservation Funding	
Appendix D	613
Environmental Calendar	
Glossary	615
Index	645
